Japan Silver Sulfate Technology

Silver Ion coloring principle

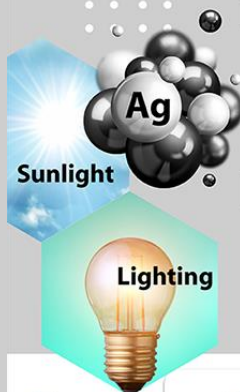

It is included silver ion which will become one layer atom protective film on the hair surface by sunshine irradiation or lighting after combing.

Through silver atomic absorption spectrum and make grey / white hair become more darker.

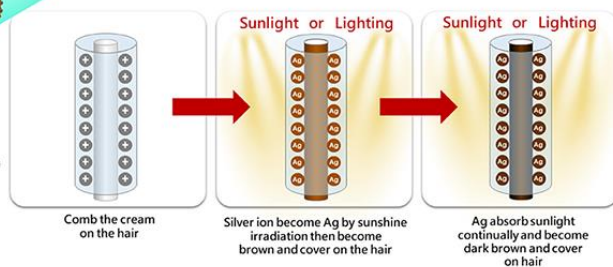

Not traditional hair dye

Color is changed by atom protective film on the hair surface after sunlight or lighting but not invading into the hair scales, so it is not hair dye but colorant only.

The coloring principle is colored same as painting and it is non-adhesive on the scalp or skin so could use it reassured.

- Colorant
- Silver ion
- Ag (Metal silver micro ion)
- Hair

* Microscale of silver ion accord with safety standard

Silver is one of the micro scale elements in human tissues without harmless to the human body. According to WHO latest [World Health Organization Drinking Water Quality Guidelines] Fourth Edition, drinking water with a silver ion concentration less than 0.1 ppm will not cause adverse effects on the human body.
